And when things go wrong…

“Fix it now! But… you can’t look at it or touch it.”

“Now, tell me what command to run…”

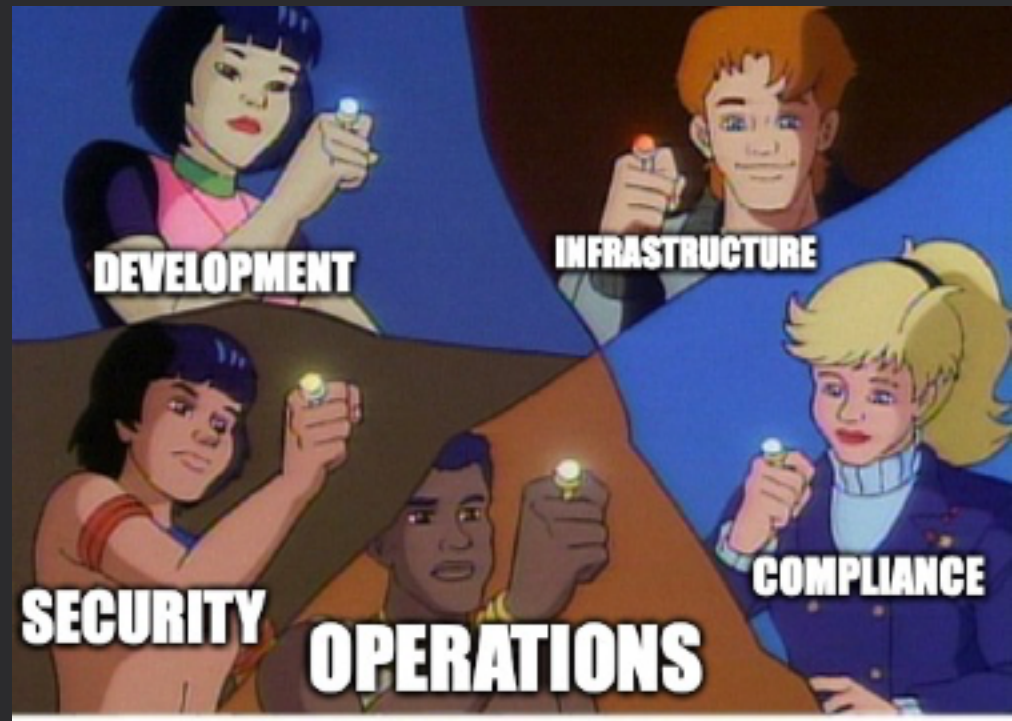
Making SoD work within an Agile context

High degree of automation is key

- Automate **EVERYTHING**. Code makes intention transparent - thus makes malice harder to hide.

Code reviews are also key

- Enforce independent review/approval (PRs) to ensure quality, security, safeguard against abuse.


With the above in place, no individual can make changes or declare something complete until automated tests pass, and an independent review has been completed.
