

Setting up for Development

Activity

GOAL

Get your team ready to start writing code, create essential team docs, and establish a baseline of automation.

INSTRUCTIONS

Together, we will:

- Get logged in to your development environment
- Review repository layout
- Review branching and integration rules
- Review automation already in place

DELIVERABLES

- All team members can login
- A wiki for your team, with at least placeholders for your working agreement, DoR, and DoD.
- A functional “hello world” application in the language your team chose
- A Makefile with working targets for all applicable tasks.

As a team, you will:

- Clone down the sample repo
- Switch to your branch
- Create your hello world app
- Setup automation points
- Get things working in CI
