

We welcome our Robot overlords!

Our build automation approach

We have normalized our automation approach across all of our example projects. This enables newcomers to jump into a project and make contributions quickly, as they only need to learn the automation entry points.

The following have been set up for you

- Sample projects in Java, dotnet, Python
- Basic automated Unit and Acceptance tests
- CI Build automation and result publishing
- Static security analysis via CodeQL
- Secret scanning
- Automated dependency scanning (security and currency)

Let's tour a repo together.

java-cucumber-reference Public template
Reference project of java, gradle, and cucumber
● Java MIT 0 0 0 0 Updated 2 hours ago

python-robot-reference Public template
Python Reference Code
● Python MIT 0 0 0 0 Updated yesterday

dotnet-reference Public template
Working example of testing in dotnet using SpecFlow
● C# MIT 0 0 0 0 Updated 8 days ago

java-fitnessse-reference Public template
A starting project with java, maven, and fitnessse
● Java MIT 0 0 0 0 Updated on Mar 27
