Info Exp - Tell, Don't Ask

Behavior based entirely on the state of an object should be made INSIDE that object

```
class Message {
   Header header;
   Body body;

String toString() {
   if (body.isEncrypted()
        body.decrypt();
   return header.toString();
        + body.toString();
}
```

Creator

Who should create this thing?

- Who contains or aggregates it?
- Who closely uses it?
- Who has the data needed to create it?

The more of these things are true, the better
