Info Exp - Tell, Don't Ask

Behavior based entirely on the state of an object should be made INSIDE that object

```java
class Message {
    Header header;
    Body body;

    String toString(){
      if (body.isEncrypted()
          body.decrypt();
      return header.toString()
          + body.toString();
    }
```

```java
class Message {
    Header header;
    Body body;

    String toString(){
      return header.toString()
          + body.toString();
    }
```

Creator

Who should create this thing?
- Who contains or aggregates it?
- Who closely uses it?
- Who has the data needed to create it?

The more of these things are true, the better
